

# Working Group Transportation „AKB“

## Our Guiding Principle

In accordance with the statutory requirements of the FS, the AKB is committed to the **safety and protection of people and the environment**. AKB's activities cover a wide range of technical and administrative tasks including the **implementation and application of relevant national and international regulations**, amendment of existing regulations, support of basic/advanced training of personnel involved in transport and the **development of solutions** to practical and regulatory problems arising from transport of radioactive material.

## From Practice – for Practice

Transport package for radioactive radiation sources

## Main Topics

- Exchange of professional information and practical experience
- Preparation of **guidance material for the transport of radioactive material**
- Discussion of technical/administrative problems arising from the implementation and application of relevant regulations including the **development of pragmatic solutions**
- Development of proposals for **changes/amendments to the international regulatory framework** and the Swiss and German national legislation concerning the transport of radioactive materials

Participants of the 45th AKB-Meeting in Braunschweig (2019)
